Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1 – 28 (Canceled)

29. (Previously Presented) A method for analyzing a change in the functionality of the heart and the respiratory system of a patient, comprising:

- identifying the respiratory activity [22] and cardiac sounds [20], wherein said identifying comprises:

- 1. collecting at least said cardiac sounds [20] by the means of at least one microphone;

- ~~2.~~ separating said cardiac sounds [20] apart from the sounds related to said respiratory activity [22], by the means of a signal conditioning module [28];

- temporally segmenting said respiratory and said cardiac sounds to express the segments of physiological rhythmicity, by the means of a feature extraction module [30];
- extracting stable features of the heart sounds with respect to their timing in the respiratory cycle, thus providing synchronized stable features for diminishing stochastic variability, by the means of a timing analysis module [32];
- averaging the features of segments- of heart sounds with respect to the corresponding respiratory cycle; wherein said averaging resulting — whilst averages in which preserving the temporal variability- of said segments is preserved;
- determining the extent of temporal variability ~~of~~ in groups of synchronized stable sound features, and
- detecting change over time of at least one feature in a
